Pertinent Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

JP 2000-012217 discloses a method of manufacturing a color conversion filter comprising the steps of forming patterned light shielding layers on a translucent substrate, forming a film of photo-curing color conversion layer forming material on the substrate and light shielding layers, back exposing the photo-curing color conversion layer forming material from the substrate side, and removing the unhardened photo-curing color conversion layer forming material.

JP 2003-229261 discloses a method of manufacturing a color conversion filter comprising the steps of forming a wettability change layer on dividing walls of a board, bringing a photocatalyst board into contact with the wettability changing layer, irradiating the wettability changing layer to form lyophilic zones between the dividing walls, and forming color filter layers and color conversion layers by ink jet printing.

US 2002/071071 discloses a process of forming a color filter comprising the steps of forming red, blue and green filter segments on a substrate, and forming a flattening layer comprising a photo-thermosetting resin containing a fluorescent material that functions also as a wavelength converting layer.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

In a method of manufacturing a color-converting filter comprising the steps of forming color filter layers on a transparent substrate, and forming a colorant layer containing a color-converting colorant on the color filter layers, wherein the colorant layer forms color-converting layers which emit, through wavelength distribution conversion, light that will be transmitted by the color filter layers, the prior art does not teach or suggest the process further comprising the steps of exposing the colorant layer through the transparent substrate and the color filter layers using colorant-decomposing light to form color-converting layers in positions corresponding to the color filter layers, wherein the color-converting colorant is decomposed by light outside a wavelength region transmitted by the color filter layers, and the colorant-decomposing light contains a wavelength component that decomposed the color-converting colorant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
